

PDF Vault

User Guide

Version 1.2.0 | Developed by AI Team - IT Department

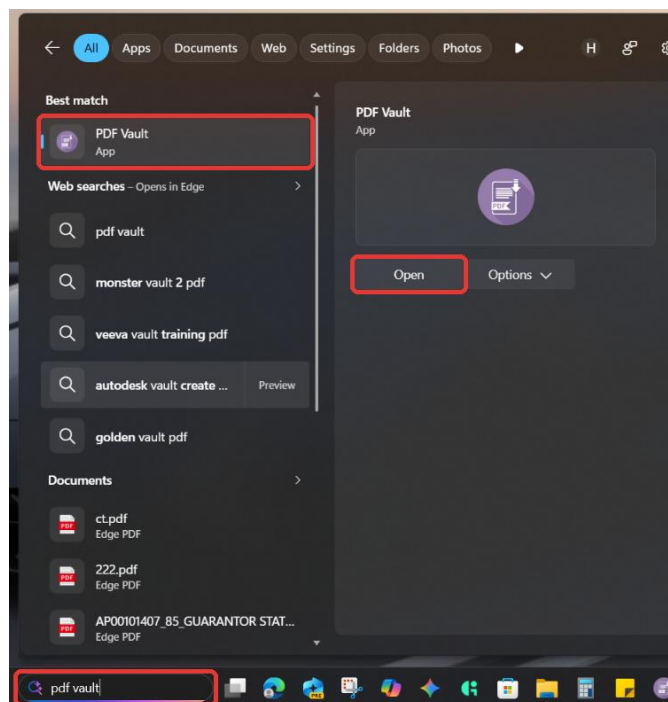

PDF Vault is now on your computer. Use it to manage your PDF files quickly, easily, and safely. It works 100% offline. You do not need the internet, and your files never leave your computer. This guide shows you how to use it, step by step.

How to Use PDF Vault

STEP 1

Open the app

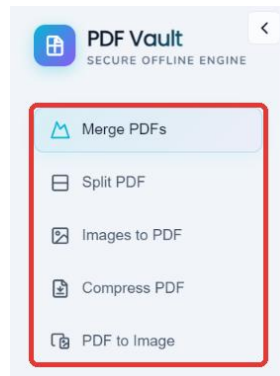

1. Click once in the **Search Box** at the bottom-left of your screen.
2. Type **PDF Vault**.
3. Click the purple **PDF Vault** icon or click **Open**.

STEP 2

Choose what you want to do

Look at the **Left Menu**. Click on the job you want, for example **Merge PDFs**.

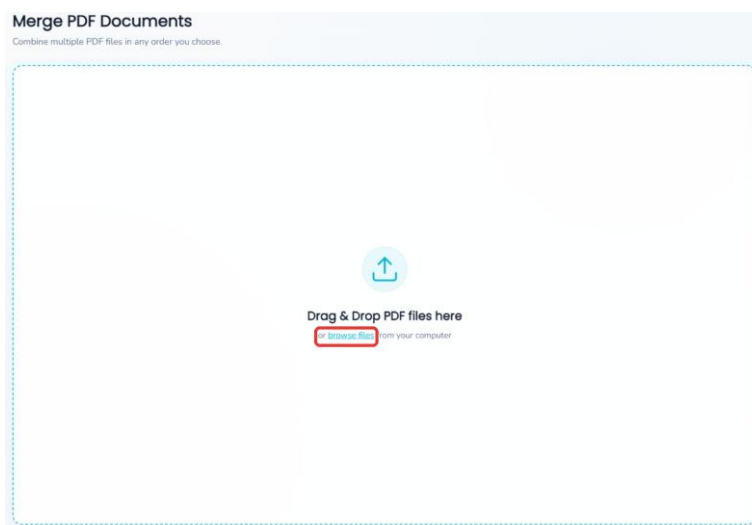

The button turns **light blue** when it is chosen.

STEP 3

Add your PDF file

Put your file into the big, dotted box in the middle.

Way A: Drag and Drop

1. Click your PDF and **hold** the left mouse button.
2. Drag it to the middle of PDF Vault.
3. **Let go**. Done! ☒

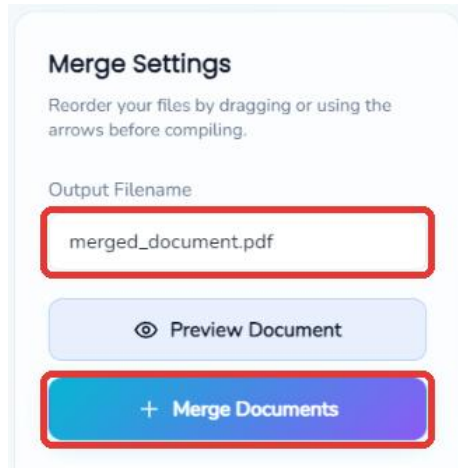

Way B: Browse Files

1. Click the blue words **browse files**.
2. Click your PDF, then click **Open**. Done! ☒

STEP 4

Click the blue button and save

Look at the **right side** of the app.

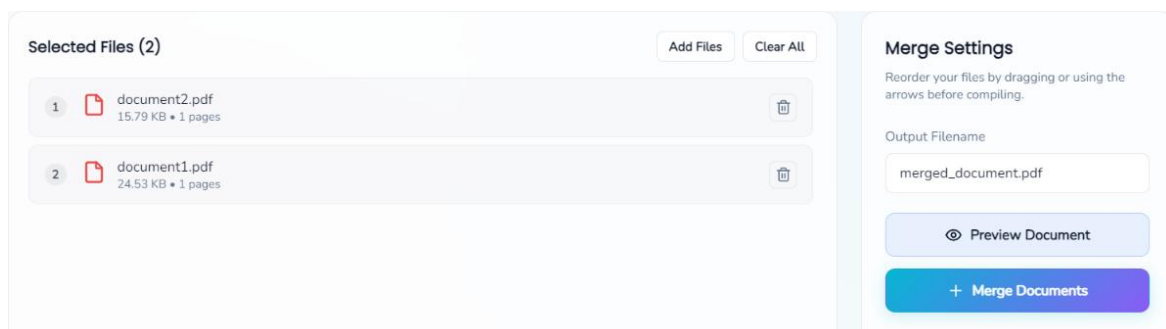

1. Choose a name for your new file in the "Output Filename" box.
2. Click the big blue button. Choose where to save (for example Desktop).
3. Click **Save**. Done! ☒

 Wait a few seconds. Click only **once**.

What Each Button Does

Merge PDFs

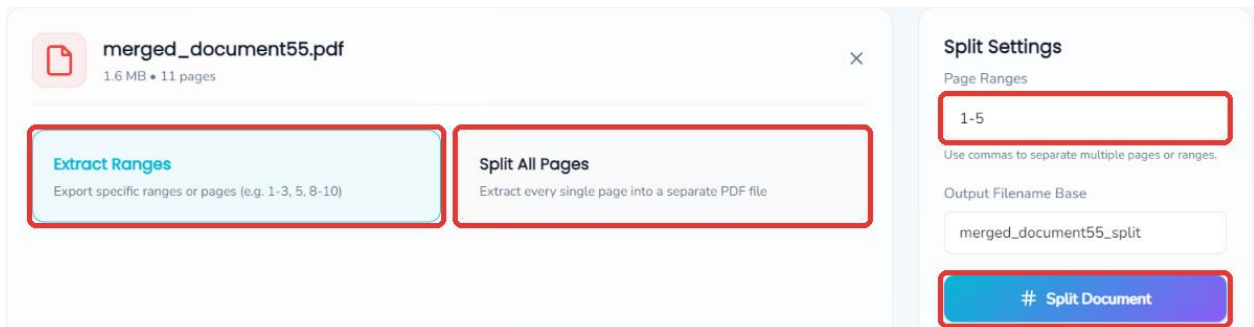

Join 2 or more PDFs into one.

1. Add your files.
2. To change the order, **drag a file up or down**.
3. Click **Merge Documents** and save.

Split PDF

Take out only the pages you need.

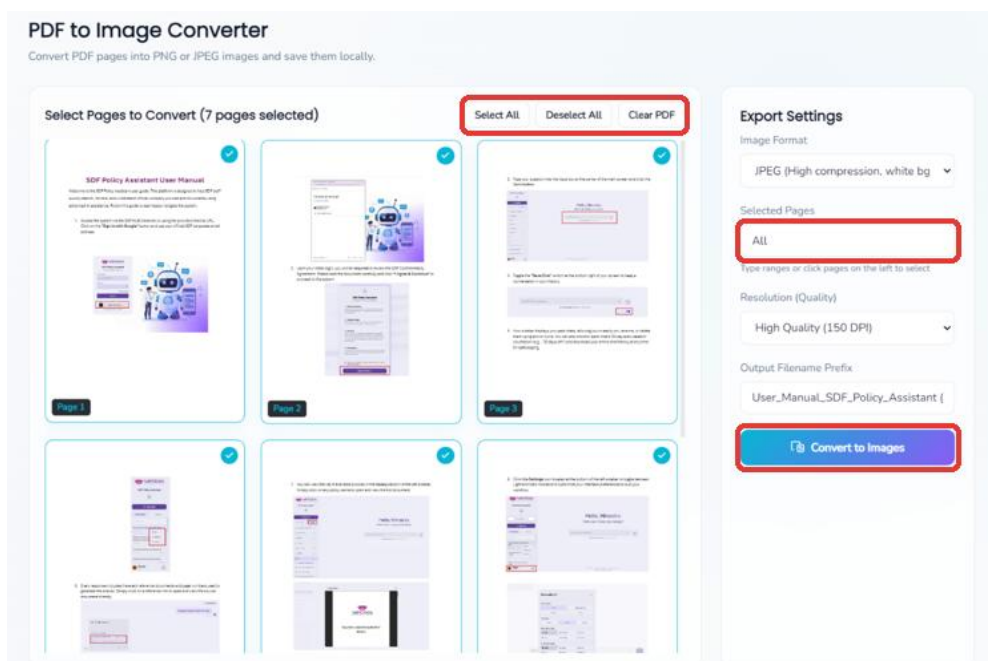

The screenshot shows a web interface for splitting a PDF. At the top, a file named 'merged_document55.pdf' (1.6 MB, 11 pages) is loaded. Below this, there are two main options: 'Extract Ranges' (with a description: 'Export specific ranges or pages (e.g. 1-3, 5, 8-10)') and 'Split All Pages' (with a description: 'Extract every single page into a separate PDF file'). To the right, the 'Split Settings' panel is visible, showing 'Page Ranges' set to '1-5', 'Output Filename Base' set to 'merged_document55_split', and a large blue button labeled '# Split Document'.

1. Add your PDF.
2. Type the pages you want, like **1-5** or **1-3, 8-10**.
3. Click **Split Document** and save.

Want every page as its own file? Choose **Split All Pages**.

PDF to Image

Turns every PDF page into a photo.

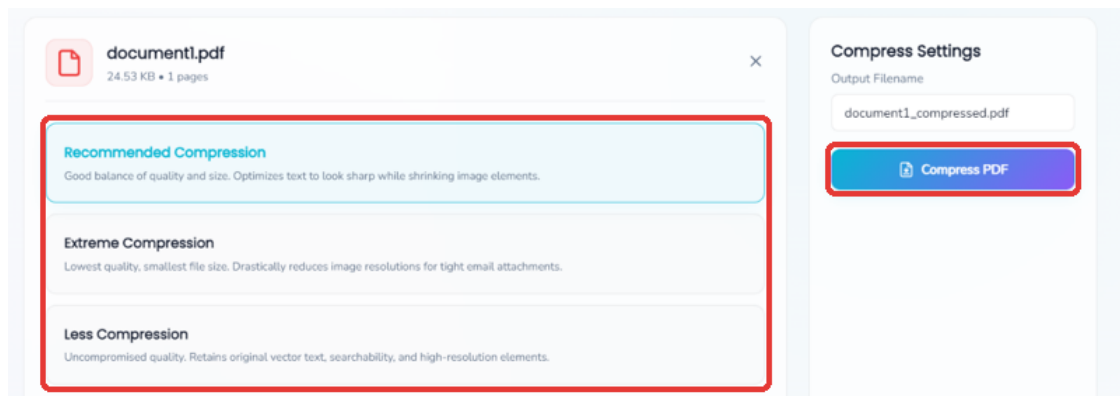

The screenshot shows a web interface for converting PDF pages to images. The main area is titled 'Select Pages to Convert (7 pages selected)' and displays a grid of six page thumbnails, each with a checkmark in the top right corner. Above the grid are buttons for 'Select All', 'Deselect All', and 'Clear PDF'. To the right, the 'Export Settings' panel is visible, showing 'Image Format' set to 'JPEG (High compression, white bg)', 'Selected Pages' set to 'All', 'Resolution (Quality)' set to 'High Quality (150 DPI)', and 'Output Filename Prefix' set to 'User_Manual_SDF_Policy_Assistant'. A large blue button labeled 'Convert to Images' is at the bottom right.

1. Add your PDF. You will see big pictures of every page.
2. Click a picture to select it or type page numbers like **1-3**.
3. Click **Convert to Images** and save.

Compress PDF

Make a heavy file smaller.

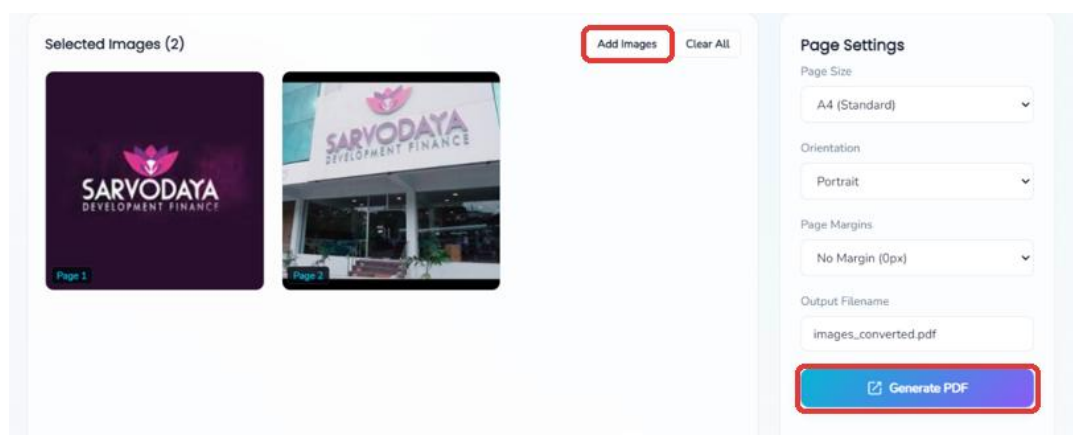

1. Add your file.
2. Click **one** of the 3 boxes.
3. Click **Compress PDF** and save.

What do the 3 boxes mean:

- **Recommended** - good size and good quality. Best for most files.
- **Extreme** - smallest file, lower quality.
- **Less** - best quality, but the file stays bigger.

Images to PDF

Put your photos into one PDF.

1. Add your photos (JPG or PNG). Click **Add Images** to add more.
2. Each photo becomes one page, in order: Page 1, Page 2...
3. Page Size and Orientation are already set. Leave them as they are.
4. Click **Generate PDF** and save.
